WORK EXPERIENCE

Junior Web Developer(internship)

Connatix

March 2022 - May 2022 / Cluj-Napoca,CJ

- The goal of the internship team was to create a intranet site for the employees of the company.
- During this time some of the soft skills that I manage acquired are: how to actually work in a company following **Agile** techniques, how to structure work using **YouTrack**, I found out how to **work in a team**, a way to **communicate** between colleagues **using Slack**.
- Beside those I manage to add some hard skill like **TypeScript, Playwright** (used for end-to-end testing for modern web apps) and improve some skills that I already had: **JS(JavaScript) OOP, Github.**

OSF Academy Student

OSF Digital

February 2022 - March 2022 / Cluj-Napoca, CJ

- The responsibilities we had in the first 2 weeks were to finish some courses on **Treehouse** so we can have basic knowledge of **HTML, CSS,** and **JS(JavaScript)**. In the last 3 weeks we had to learn **Salesforce Commerce Cloud** to expand our knowledge in web programming through exercises applied to the Salesforce platform.
- After I finish, I realize that I like to work more with React instead of Salesforce.

Frontend Developer(internship)

Group Five Software

January 2022 - February 2022 / /Cluj-Napoca, CJ

- By the end of the internship we should have created the frontend part of a website and deploy it. So in this period I managed to learn some hard skills like **React**(so I can build reusable components for future use**),** **Redux Toolkit, Axios, React Router 6** from an Udemy course witch I specify in my certifications and learn in the same time **Kubernetes** and **Docker** from Youtube.

Tennis
Ping Pong

Junior Web Developer(internship)

Fortech

July 2019 - October 2019 / Cluj-Napoca, CJ

- For a period of 3 months I was an intern at Fortech where I studied web development concepts. Here I did my internship for college. I think the most important thing I left with after this period is the mentality with which a big project should be viewed / approached. This overview of the work environment has made me realize the things I need to improve in the future to become a better programmer.

PROJECTS

Ectmos
- To create this app I used the **MERN stack(MongoDB, Express.js, Node.js)** but I replace React with **Bootstrap**. I used **Postman** to monitor and test **APIs** and I manage to implement session along with **user authentication and authorization.**
- Like all my projects, the website is **fully responsive**. I used Mapbox do add the map and the location of the event.
- It is a website that brings together the person how wants to play a sport with the person who needs a players to complete his team.

Jobster
- Jobster it is a **React** app build with **Redux Toolkit**. If you want to realize any of the **CRUD** operation besides reading, you need an account. You can see part of the app in action by accessing Demo App. To fetch the questions I used **Axios** and I used **React Router 6** for a better/faster navigation.

Online CV
- I turned my CV in a website for an easier way to interact and display the information. By accessing the link above you will have access to more information in an easy to read format and there you can see **my projects**.

EDUCATION

Bachelor of Engineering
Faculty of Automation and Computer Science
Technical University of Cluj-Napoca

2016 - 2020   /   Cluj-Napoca
